

Websites and pages to visit for live table data for web-scraping PBI practice

1. Wikipedia (The Gold Standard for Demos)

Wikipedia is the best place for a live demo because almost every "List of..." page uses standard HTML tables.

- **Why it's great:** Extremely stable structure and diverse topics.
- **Example Pages:** * [List of countries by GDP \(nominal\)](#)
 - [List of highest-grossing films](#)
 - [Demographics of the World](#)

2. Yahoo Finance

If you want to show financial data analysis, Yahoo Finance is the industry favorite.

- **Why it's great:** It provides "Historical Data" tabs for any stock ticker that are perfectly formatted as tables.
- **Example Page:** [Apple Inc. \(AAPL\) Historical Data](#)
- **Pro Tip:** This is perfect for showing how to analyze trends over time.

3. World Bank Open Data

For a "Data for Good" or "Global Trends" angle, the World Bank is unbeatable.

- **Why it's great:** They provide massive tables on global indicators like literacy rates, CO2 emissions, and poverty.
- **Example Page:** [World Bank Indicators](#)

4. Sports-Reference

This network of sites (Baseball-Reference, FBref for soccer, Basketball-Reference) is built entirely on tables.

- **Why it's great:** The data is deep, dense, and requires "cleaning"—which makes for an excellent data analyst demonstration.
- **Example Page:** [English Premier League Stats](#)
